CivicEye

Data Conversion with CivicEye

How our team expertly guides your agency during data conversion

Transitioning to new software systems while retaining access to historical data is crucial for organizations seeking to maintain data integrity and streamline operations. CivicEye emphasizes the importance of prioritizing data conversion into the master record index to consolidate all data into a centralized repository. By doing so, agencies can enhance data integrity, analysis capabilities, and scalability for long-term success.

With CivicEye's solutions, agencies can confidently navigate this transition, ensuring consistency, accuracy, and accessibility of their data resources, ultimately achieving lasting efficiency in their data management practices.

	Data Conversion Process	CivicEye's Approach
Initial Assessment	Conduct thorough analysis of existing data infrastructure.	Engage stakeholders, gather end-user-friendly data samples, & ensure clarity of scope.
Data Analysis and Mapping	Determine a suitable approach for data mapping.	Assist in gathering region data, configure test site, ensure accurate data mapping.
Data Cleansing and Preparation	Clean and prepare data for accuracy and consistency.	Coordinate secure handoff of legacy data & ensure data integrity.
Security and Compliance	Clean and prepare data for accuracy and consistency.	Prioritize data security and compliance throughout the process.
Testing and Validation	Conduct rigorous testing and validation of converted data.	Regular updates to customers, maintain transparency and communication.
Training and Support	Provide training and support for a smooth transition.	Thorough QA testing, compare with legacy data, ensure data accuracy.
Documentation	Maintain detailed documentation for future reference.	Oversee data review feedback & ensure customer satisfaction.

Legacy Data Portal

We understand the complexities presented when transitioning to new systems, and that access to valuable historical data may be critical to on-going operations within an organization. The CivicEye Legacy Data Portal provides clients with a no-cost alternative to a data conversion, allowing clients to view legacy data in a read-only format, reduce project costs, and shorten the project implementation process. We are happy to work with organizations to assess whether the Legacy Portal will suit the agency's needs for accessing legacy data*. When a high quality legacy dataset is present, we recommend prioritizing a full data conversion to enable full utilization of the legacy data in the CivicEye platforms master index.

*External formats may pose risks such as data integrity issues, inconsistencies, and potential security vulnerabilities. Users are advised to exercise caution and verify the accuracy and integrity of data accessed in external formats before relying on it for critical decisions or operations.
